

Nakshatra Kaushik

AI Engineer

Ghaziabad, Uttar Pradesh, India

Phone: +91-8130953769 – Email: nkshttrkaushik@outlook.in

Portfolio: nakshatrak19portfolio.vercel.app

Professional Summary

Results-driven AI Engineer with a proven track record of architecting LLM-driven workflows and scalable automation pipelines. Specializing in Generative AI and intelligent systems, with hands-on experience deploying autonomous agents that reduce operational bottlenecks. Passionate about bridging cloud AI frameworks with practical software engineering to deliver high-impact, cost-saving business solutions.

Work Experience

AssignIt AI

May 2026 – Present

Founder & Lead Engineer

- Architecting a multi-tenant B2B SaaS timetabling platform using Python, React, and PostgreSQL, supporting high-volume concurrent requests through optimized REST APIs.
- Integrating Claude AI to dynamically resolve resource conflicts, reducing manual scheduling errors by over 40% and cutting administrative workload by 30+ hours per month.

Voyage Travels

June 2026 – August 2026

AI Engineer Intern

- Engineered AI-driven workflow automations leveraging Large Language Models to streamline SEO operations, accelerating content generation pipelines by 60%.
- Implemented intelligent graphical enhancement pipelines to automatically process and compress visual assets, improving website load speeds by 35% and boosting user retention.
- Deployed autonomous agents to orchestrate end-to-end digital enhancements, driving a 20% increase in organic search visibility while saving the team 15+ hours weekly.

Projects

Ultimate SEO Suite

[Live Link](#)

Web Automation & SEO Optimization

- Engineered a high-performance SEO analysis platform capable of auditing website URLs and generating comprehensive diagnostic reports in under 60 seconds.
- Developed an automated scanning engine that evaluates 13 critical SEO parameters, instantly identifying technical gaps and rendering actionable optimization recommendations.
- Deployed a responsive web application on Vercel, ensuring high availability, rapid data processing, and seamless user accessibility.

ESP32 Energy Consumption Monitor & Predictor

[Live Link](#)

IoT Development & Machine Learning (Under Development)

- Engineered a real-time IoT energy tracking system using ESP32, voltage/current sensors, and a custom Python Tkinter desktop client for data logging.
- Implemented an Extra Trees Regressor model utilizing scikit-learn to analyze historical energy patterns and forecast future utility bills.

Database Query Agent with Natural Language Interface

[Live Link](#)

LLMs & Database Optimization

- Developed an intelligent natural language-to-SQL interface for MongoDB leveraging Hugging Face Transformers and Microsoft Database Agent for query optimization.
- Containerized the end-to-end application using Docker and delivered an interactive frontend interface via Streamlit.

AI-Powered Browser Automation Agent

[Live Link](#)

Generative AI & Web Automation

- Engineered an autonomous web automation agent utilizing Claude Sonnet 4.6, Python, and Selenium to execute complex, multi-step browser tasks.
- Deployed the robust application on Vercel, integrating the Browser Agent API for dynamic element interaction and seamless data extraction.

Automated Email Outreach Pipeline

Workflow Automation & APIs

- Automated personalized recruiter outreach workflows by integrating n8n, Google Sheets, and Apollo.io via REST APIs.
- Implemented the Gemini LLM to generate context-aware, tailored email copy based on target company profiles and job descriptions.

Speech-to-Text Telemetry System

Audio Processing & Monitoring

- Built a robust speech recognition pipeline integrating OpenVoice for high-accuracy audio transcription and NLP analysis.
- Implemented advanced telemetry and monitoring using Langfuse to track performance metrics and optimize inference latency.

Secure Data Erasure Utility

Smart India Hackathon 2026 College Finalist

Software Engineering & Security

- Developed a secure disk sanitization utility utilizing advanced algorithms to ensure complete and unrecoverable data destruction.

IoT Rain-Sensing Wiper System

Embedded Systems & Sensors

- Built an autonomous environmental response system using an Arduino UNO and microcontrollers to optimize vehicle safety.

Skills

Generative AI & LLMs: Hugging Face, OpenAI, Ollama, Prompt Engineering

AI Automation & Agents: Agentic AI, n8n, Make, Workflow Automation, Microsoft Database Agent, Browser Agent API

Programming Languages: Python, C, MySQL

Databases & DevOps: MongoDB, PostgreSQL, MySQL, Docker Desktop, Git

Edge AI & Embedded Systems: Arduino, IoT Development, Microcontrollers, Digital Signal Processing (DSP)

Tools & Frameworks: Selenium, REST APIs, LangGraph, LangChain

Education

B.Tech in Electronics and Communication Engineering

2023 – 2027

ABES Engineering College, Ghaziabad

Class XII (Engineering Sciences) - 78%

Completed in 2023

Bal Bharati Public School, Noida
